

SX10

josTech

info@josTech.ch

Vending/ejection machine for hanging products, boxes, rolls etc.

The new vending machine **SX10** is equipped with up to 100 different ejection units - depending on the size and type of products. The new patented HookDrive allows to hang products in the machine as it's very common in retail business. Due to the sliders the loading of products is very simple. The high density of products in the machine is unmatched. The unique HookDrive makes the efficient storage of non stackable products in vending machines possible for the first time.

Box products will be ejected by the BoxDrive unit, also equipped with sliders for a comfortable access.

Another example of innovative ejection units is the RollDrive for roll products.

In every situation you will find enough space for the **SX10** with its small dimensions, even in the limited zone of a check out in the supermarket. After paying resp. inserting the activated ProductCard the purchased product will be supplied automatically to your customer.

Benefits

- + 24h operation at 7 days possible
- + Operation by Cash/NFC
- + Operation by NFC (ProductCard) as an ejection machine (Option)
- + Simple loading and operation
- + Compact, small area and depth
- + Product ejection by HookDrive, BoxDrive, RollDrive ...
- + Up to more than 100 product types in one machine
- + Flexible configuration due to CAN
- + Indoor and protected outdoor use
- + Online reporting and control

SX10

Mechanics

Dimension of machine:

approx. 2000 x 1450 x 810 mm (Height x Width x Depth)

(other sizes as option)

Weight approx. 500 kg (without products, depends on equipment)

Housing made of powder coated galvanized metal sheets

Transparent components made of Polycarbonate (PC)

Electronics

Cash Payment System with mdb interface customised.

The Cashless System of the **SX10** is part of the VendingMachineController.

If operated as an ejection machine, the ProductCard contains an NFC chip beside the printed EAN code.

(System Mifare).

The ProductCard will be activated at the check out by a small activation unit, the **SA10**.

When inserting the ProductCard in the slot of **SX10**, the product will be supplied, if the ProductCard was activated before at the check out.

After ejection the deactivated ProductCard is stored in the machine for future use.

Not activated ProductCards will be rejected.

All actions are reported online.

ProductCards

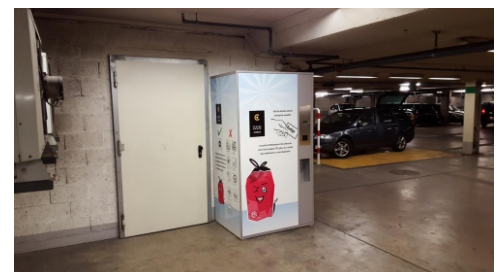

Card activation by SA10

Power supply

Connection to 230V AC
